

# Puro-lite®

## Puro-lite Environmental Policy

Our commitment to environmental responsibility is firmly embodied within all of the company's products which are specifically developed to remove contaminants, purify waste water, and improve the chemical processes of our customers for numerous applications and industries. Many products are designed to provide a positive environmental impact as a result of the high efficiency of contaminant removal and reduction of waste material in industrial process streams for our customers. Puro-lite is fully committed to environmental awareness in regards to the manufacturing of its products and business operations.

It is Puro-lite's policy to provide a long-term sustainable business operation that uses resources efficiently to eliminate or minimize any adverse environmental impact to our surrounding communities or global ecosystem. We will continue to invest in our business to provide innovative solutions that are socially responsible for our global customers. These principles are applied from the design stage, follow through to the manufacturing process in our production plants and continue through the end-use life cycle at our customer's facilities. Our objective at Puro-lite is to make continual improvements in reducing waste while developing and manufacturing products that provide value to our customers and have a positive impact on the global environment. In order to achieve these environmentally responsible goals, we will strive to:

- Determine our legal obligations relating to the environment.
- Meet or exceed these legal obligations and evaluate compliance to them at all Puro-lite facilities. We will continuously improve our processes to use resources in the most efficient manner possible.
- Actively work with our customers to provide guidance and support so that the use of our products minimizes any environmental impact at their facilities.
- Continue the development of new ion exchange resin technology that provides economic benefits to our customers, better performance, and reduces the use of natural resources and generation of waste products.
- Deliver our products in a manner that minimizes packaging waste. We re-use and recycle packaging materials whenever possible and encourage this practice with our customers, suppliers and vendors.
- Reduce greenhouse gas emissions from all our facilities and reduce energy consumption associated with the transport of incoming raw materials and the delivery of finished goods to our customers.
- Protect the environment through prevention of pollution at our facilities and from harm and degradation arising from our activities, products and services.
- Match or exceed industry best practices.
- Inform and train our employees to perform their duties with regards to the successful implementation and continual improvement of the company's environmental management system.
- Continually monitor and improve all aspects of our global operations in a continuous effort to make environmental responsibility and sustainability a core value within Puro-lite.
- Provide the framework for setting environmental objectives and reviewing and monitoring performance against established targets.
- Take actions to achieve outcomes and record nonconformities and take corrective action.
