April 19th 2021

Statement of UK REACH Compliance

Ion Exchange Resins are classified as polymers and are exempt from **UK REACH**. However, all substances (monomers) contained within the polymer matrix at greater than 2% by weight will need to be registered under **UK REACH**.

All Purolite existing **ECHA REACH** registrations (28 substances) have been "Grandfathered" across to **UK REACH**. This was completed in March 2021.

Do doing so, this ensures all imported products manufactured by Purolite China Co. Ltd. and Purolite Corporation USA remain compliant with **UK REACH** going forward.

For our Ion Exchange Resins manufactured in the European Union and imported into the UK, we will ensure our supplier has registered with **UK REACH** and/or we will register all the necessary substances (monomers) before the relevant tonnage deadline dates.

To give our customers every assurance; Purolite Ltd., will remain fully compliant with **UK REACH**.

Yours faithfully,

For and on behalf of
Purolite
